

FiberPatch^{UV}

P r o v i d i n g S o l u t i o n s

FiberPatch^{UV} is a strong, permanent and economical repair for flat and some curved surfaces. Permanent repairs can be made on many materials and meets CFIA requirements for food service areas once cured.

FiberPatch^{UV} is ideal for surface repairs when replacing an entire panel is not convenient, is cost prohibitive or in an emergency.

FiberPatch^{UV} is a UV cured prepreg fiberglass patch that is ready to go right out of the package. It requires no mixing, measuring or tools. Just peel off the backing and apply. The patch will not cure unless exposed to UV light so any left over patch can be saved and used for the next repair.
